

# RTC Events Week North America August 7 – 11 2018 St Louis, United States

TUES 7 - WED 8

WED 8

THURS 9 - FRI 10

THURS 9 - SAT 11

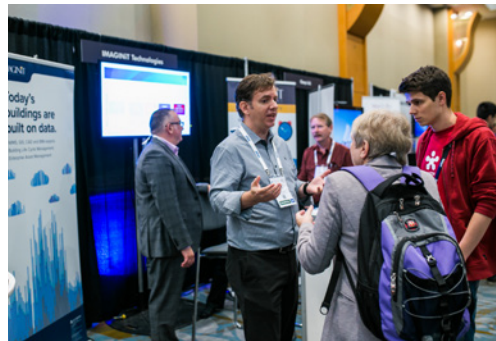

RTC Events Week includes four unique conferences held over the course of a week and have been created to advance the users of technology in Design, Construction & Operations. As an independent, not-for-profit event series, run by users, for users, our focus is on solutions not software.

Design Technology Summit, is a premier one-day forum that brings together leadership of large, multinational architecture and multidiscipline design firms looking to leverage technology for innovation and optimization of business practices.

Data Day is a one-day event preceding BILT, focusing on improving AEC data usage, understanding and visualization to answer important construction project questions and reduce project time.

Building Content Summit is dedicated to expanding collaboration and understanding between BIM content practitioners, software/service providers and manufacturers. Dismantling these silos to break new ground, BCS proactively sets and develops real direction and industry relationships by providing building product manufacturers visibility in how to respond to new digital BIM content and process directly from construction industry professionals.

BILT NA is a premier user-led three-day learning conference that gathers attendees from across North America and the globe to learn from each other, meet solution providers and review what is new in sector technology. BILT NA regularly attracts over 600 attendees across the spectrum of leading companies in the AEC industry; designers, architects, engineers, owners, contractors, consultants and software/technology vendors.
